

DOUBLE-SIDED TAPES

for reliable and invisible bonding

Effective solutions

- slit or die-cut to fit your specific application;
- available in a variety of material varieties, sizes, thicknesses and colors;
- for indoor and/or outdoor applications;
- suitable for various substrates;
- reliable bonds between various materials;
- combining different functions;
- more appealing end result due to invisible finish;
- eeight-saving;
- enables new material combinations + design efficiency;
- easy to apply;
- no drying times;
- reduces production time (also suitable for automatic processing).

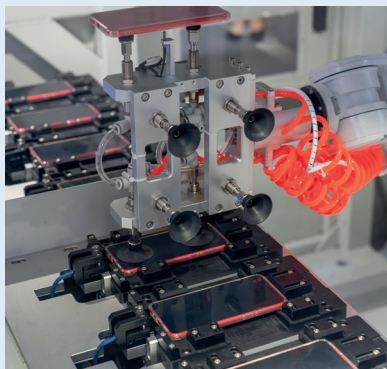

Available on a variety of materials, including:

- double-sided tissue tapes;
- double-sided transfer tapes;
- double-sided plastic film tapes;
- double-sided acrylic foam tapes;
- double-sided foam tapes.

Available with various adhesive coatings, such as:

- acrylic (dispersion/solvent/uv);
- butyl;
- rubber;
- silicone.

Combines "bonding" with a variety of functions, such as:

- heat and/or electricity conductive;
- water and/or moisture sealing;
- heat resistant;
- permanent or temporary applications;
- medically approved adhesives, which are suitable for different skin types, from young to old.

There are double-sided tapes for mounting including:

- floor coverings;
- displays and touchscreens;
- emblems;
- handles;
- baseboards;
- cable trays;
- nameplates;
- kick plates;
- decorative strips;
- mirrors.

Double-sided tissue tapes

Double-sided tissue tape coated with a high-quality adhesive layer covered by a paper or plastic liner.

Product features:

- good adhesive strength;
- good resistance to shear forces;
- resistant to high temperatures;
- high tack;
- resistant to high peel forces;
- available in multiple thicknesses, between: 0.05 mm - 0.17 mm;
- color: milky white.

Applications:

- making splices in the cardboard industry;
- self-adhesion of foams;
- self-adhesion of vinyl, wood, paper etc;
- assembly of store displays;
- mounting of nameplates.

Double-sided transfer tapes

Very strong adhesive transfer tape (with or without scrim reinforcement) with a paper or plastic liner.

Product features:

- very high adhesive strength;
- adheres perfectly well even to hard-to-adhere substrates;
- highly resistant to plasticizers;
- scrim reinforcement prevents stretching;
- available in several thicknesses, between: 0.4 mm - 2 mm.

Applications:

- self-adhesion of felt, carpet and plastics;
- self-adhesion of open- and closed-cell foams, such as EPDM etc;
- available in different thicknesses for smooth and rougher materials;
- suitable for both indoor and outdoor applications depending on type

Double-sided acrylic foam tapes

A double-sided adhesive tape made of a thicker homogeneous acrylic adhesive layer covered by a paper or plastic liner.

Product features:

- very high final adhesive strength;
- filling ability;
- excellent UV resistance;
- good aging and weather resistance;
- passes powder coating process;
- available in multiple thicknesses: 0.25 mm, 0.5 mm, 0.8 mm, 1 mm, 1.1 mm, 1.5 mm, 2 mm;
- colors: white, gray, black and transparent.

Applications:

- bonding of aluminum structures;
- joining of dissimilar materials;
- mounting stiffening ribs in doors and panels;
- various assembly and joining applications as a replacement of mechanical fasteners and welds;
- absorbs vibrations, uneven substrates and differences in expansion well.

Double-sided foam tapes (PE, PVC, neoprene, silicone, EPDM, etc.)

Coated on both sides with a high-quality adhesive layer covered by a paper or plastic liner.

Product features:

- high initial adhesive strength;
- very resistant to high shear loads;
- foam remains flexible, does not discolor and absorbs almost no moisture;
- absorbs vibrations, irregularities in the substrate and expansion differences;
- thermally insulating;
- available in several thicknesses: 0.8 mm, 1 mm, 1.5 mm, 2 mm, 3 mm;
- colors: white, gray and black.

Applications:

- fixing mirrors, panels, displays and bathroom accessories;
- self-adhesion of profiles.

Double-sided plastic film tape (PE, PVC, PET etc.)

With a high-quality usually acrylic adhesive layer, covered by a paper or plastic liner.

Producteigenschaften:

- high initial adhesion;
- high shear strength and very high final adhesive strength;
- excellent moisture resistance;
- good temperature and UV resistance;
- excellent all-round tape for indoor and outdoor use;
- available in multiple thicknesses, between: 0.1 mm - 0.25 mm;
- color: standard white, black and transparent.

Applications:

- self-adhesion of profiles;
- assembling displays;
- fixing roller blind fabric on aluminum tubes;
- self-adhesion of baseboards;
- mounting cable ducts;
- for all (splice) applications where a high initial adhesion and shear strength is required.

Customized tapes

All of the products in the brochure can be customized. Our converting capabilities include die-cutting, laminating, slitting, rewinding, printing and spooling. Almost every shape and size is possible and, of course, rolls are available in a variety of widths and lengths.

Benefits of customization:

- faster to apply than traditional fastening methods;
- several new material combinations are possible;
- perfectly fits the application;
- more appealing end result;
- optimizes your process;
- less waste.

Your own materials self-adhesive:

Together with you, we select the required adhesive layer and execution. In terms of materials you can think of: foils, films, cloths, foam, felt, fabric and other materials on rolls, sheets or plates.

Advantages: you use your own familiar materials, which are faster and more efficient to apply, with a visually perfect finish.
